

## Integrate snom with Outlook™

### Outlook and snom

A new outlook for the world of computer telephony integration.

### CTI just got easier

Flexor™ software from Camrivox integrates snom with Outlook for low cost CTI, so enabling features such as click-to-dial, contact screen pop-ups and on-screen call control.

### Any PBX – hosted or premise based

Flexor software works with any snom 3 series handset deployed within any snom compatible IP PBX environment - hosted or premise based.

Simply put, as long as there is a snom handset on your desk, then Flexor will integrate it with Outlook.

### No servers – just a simple download

Flexor is straightforward to install. Just download it from the web onto your desktop and let it automatically link your snom handset with your PC for immediate CTI.

### Only Flexor CTI is engineered this way

Flexor products save you time and money because it does not need additional servers to make it work. That means no expensive and time-consuming installations that cause unnecessary disruptions and complexities to the network.

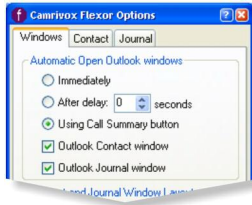

Instead, Flexor's simple download fits effortlessly into your existing snom solution for hassle free Outlook CTI.

### Click-to-dial and screen pop-ups

Flexor drives snom and Outlook by activating click-to-dial and contact pop-up screens. Incoming calls generate pop-ups with the caller's contact details, while users can activate outbound calls simply by clicking on Flexors purple icon button.

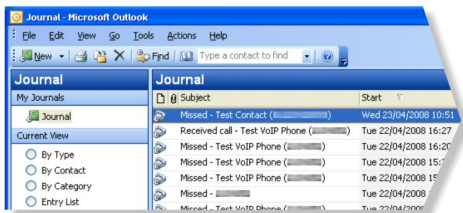

## Key features

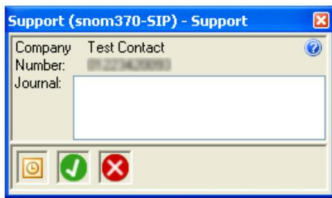

### Adjustable user screens

People use computers in different ways, so Flexor lets you adjust the position and size of pop-ups on your desktop so they fit your working environment.

### Call logging

You can set Flexor to log all calls in the journal for future reference and management reporting.

### Contact summary minimises disruption

By setting the small window pop-up on your PC you can ensure you are not disturbed, while still enjoying the benefits of caller ID, control for on hold, 3 way calling and notes for the journal.

### Click-to-dial direct from contacts

Flexor provides click-to-dial directly within your contact window. By clicking the purple Flexor icon buttons you immediately dial the number on your snom phone.
